PROJECTS

CloudWatch – CI/CD Pipeline Automation | Docker, Kubernetes, GitHub Actions, GHCR Technologies: Docker, K8s, GitHub Actions, Next.js, GHCR

- Automated a full CI/CD pipeline using GitHub Actions to build an optimized, multi-stage Docker image (leveraging Next.js standalone mode) and push it to GHCR.
- Deployed to Minikube via declarative Kubernetes manifests, configuring 3 replicas, Liveness/Readiness Probes, resource limits, and **ImagePullSecrets** for a secure, highly available deployment.s

DevOps CI/CD Deployment on AWS EC2 (Docker + GitHub Actions)

- Built an end-to-end **CI/CD pipeline using GitHub Actions** to automate deployment on every push to the `main` branch
- Deployed a containerized web application using **Docker + Nginx** on an **AWS EC2** instance

AWS Observability Stack (Prometheus + Grafana)

- Deployed a complete monitoring stack on **AWS EC2** using **Docker Compose** (Prometheus, Grafana, Node Exporter, Alertmanager).
- Configured **Prometheus scraping** to collect real-time system metrics (CPU, RAM, Disk, Network) from the EC2 instance..
